Abstract (en)
[origin: EP0608201A1] The supporting frame consists of a base frame (1) on which two support yokes (2) are removably fitted. The support beams (4) of the yokes are extensible (5) so that sacks of seed potatoes started thereon can be pushed apart for pregermination (chitting) in such a way that access of air and light is maintained. The sacks can be emptied whilst remaining on the frame through the base frame (1) or outside the latter from the pulled-out extensions (5). When not in use, the base frames (1) can be stacked and the associated yokes (2) can be suspended over them in a pushed-together state. <IMAGE>
