Abstract (en)

[origin: EP0608457A1] Fire-protection glazing (1) composed of at least two prestressed panes (2, 3) is described, each pane having on its side facing the second pane an IR-reflective layer (7, 8) composed of doped SnO₂ with a sheet resistance of at most 200 OMEGA . The advantage of this glazing is that the life is considerably greater than similar uncoated glazing.
