Abstract (en)
[origin: EP0608486A1] With a device for displaying information or the like by means of two domed information surfaces which are arranged opposite to one another and together form an oval-shaped cross-section, a solution is to be created by means of which a device of this kind can be variably designed, easily mounted and possibly disassembled in a simple manner without problems. This is achieved in that the two domed information surfaces (2, 3) can be clamped in between two edge side elements (4, 5) which are connected to one another at a distance, connecting means (11, 12, 17) of the edge side elements (4, 5) being arranged between the two information surfaces (2, 3). <IMAGE>
