Abstract (en)  
A cover (3) for a fuel delivery device (1) is provided which encloses a housing (13) and handle (7) of the device (1) and is fitted by placing a collar portion (29) over the end of a nozzle (17) and sliding the collar portion (29) down the nozzle so that the cover (3) is placed over the housing (13) and handle (7). The cover (3) is then secured to the device (1) by use of clip means (37) that engage with the handle (7). A flat top (21) is provided with indicia indicating that a petrol pump is out of use. When the cover (3) has been fitted, it cannot be removed from the device (1) without first removing the device (1) from a holster (43) in which the device (1) rests when it is not in use. <IMAGE>
