Abstract (en)

[origin: EP0608720A1] The invention relates to a variable arcuate deflection for awnings and shading installations, which exhibit at least one guide rail (1), within which the tension elements (15) for the awning-canvas movement are arranged and which are adapted, by bending, to an individual structure inclination. In this arrangement, the invention provides that the guide rails (1), which are to be matched, in terms of their angular position, to the structure inclination, are designed in at least two parts and are connected to one another in an articulated manner via an adapter (3) which has at least one roller (2). <IMAGE>
