Abstract (en)

[origin: EP0608871A2] A method for wrapping a bale of compressed, resilient fibers comprises the steps of: providing a bale wrap kit. The kit includes at least two pieces. Each piece, when joined with the other piece, is adapted for substantially enclosing and containing the bale of compressed, resilient fibers. Velcro-type fasteners are located along an edge portion of each piece and are adapted for joining the pieces to one another. Uncompressed, resilient fibers are provided. A portion of the uncompressed, resilient fibers are surrounded with the kit. Those fibers are compressed, and the velcro-type fasteners are engaged.
