Abstract (en)
[origin: WO9306559A1] A universal interconnect matrix area array (605) comprised of a first set of conductive leads (608-1 through 608-J) formed in a first direction, a second set of conductive leads (609-1 through 609-K) formed in a second direction, the second direction being not parallel to the first direction, and structure for electrically interconnecting selected ones of the conductive leads in the first set of conductive leads (608-1 through 608-J) to one or more of the conductive leads in the second set of conductive leads (609-1 through 609-K). Input/output pads (607-1,1 through 607-M,N) are formed and connected to selected ones of the first set of conductive leads (608-1 through 608-J) and second set of conductive leads (609-1 through 609-K). Selected ones of the conductive leads are segmented thereby to allow any input/output pad to be connected to one or more of the other input/output pads (607-1,1 through 607-M,N) without removing from use any input/output pads (607-1,1 through 607-M,N), not intended to be so connected.
