Abstract (en)

[origin: EP0609506A1] In a device for supplying different inks to an ink user, especially an ink fountain of an inking unit (4) assigned to a printing machine, with alternately employed branch lines which can be connected to a respectively associated ink source and lead to the ink user and which each contain a shut-off member (12) actuable by means of a drive device (15), high efficiency and ease of operation can be achieved by assigning to the user at least one fixedly arranged drive device (15), to which the associated shut-off members (12), which can be drive-coupled to it, can be secured releasably. <IMAGE>
