Abstract (en)
[origin: EP0609537A2] The invention relates to a stack of framed shuttering elements (2) with mutual fixing, said framed shuttering elements (2) being arranged horizontally and one above the other, and the frames of the outer framed shuttering elements (2) of each stack being arranged on the outside. The invention recommends that a stack shoe (1) be arranged between the adjacent framed shuttering elements (2) and/or that a telescopic bar (7) and/or a strap (9) has end-side claws (8), that one claw (8) engages around the frame (3) of the lowermost framed shuttering element (2) of the stack and one claw engages around the frame of the uppermost framed shuttering element (2) of the stack and/or that a transporting-type suspension gear be made up of a shoe (11) and two flexible tension (pulling) elements (12), and that the shoe (11) has a leg which engages from beneath into the inner side of the corner of the lowermost framed shuttering element (2) of the stack. <IMAGE>
