Abstract (en)  
[origin: EP0609807A2] A plastic card provided with a magnetic stripe, which is very difficult to forge or alter and, even though subjected to forgery or alteration, enables the forgery or alteration to be easily detected in appearance. The plastic card comprises a card substrate and a hologram-magnetic stripe comprising, provided on said card substrate in the following order, an adhesive layer, a first magnetic recording layer, a second magnetic recording layer, a transparent continuous thin film layer and a hologram forming layer. The first magnetic recording layer and the second magnetic recording layer are such that one of the magnetic recording layers has a coercive force at least twice as high as the other magnetic layer and a Curie point at least 100 DEG C below the other magnetic layer and, when the magnetic recording layers are heated at a temperature in the range of from the lower Curie point to 30 DEG C below the lower Curie point, they become substantially identical to each other in saturation writing current value. <IMAGE>
