Abstract (en)

[origin: DE4010174A1] In a nonwoven laying device with at least two reciprocating carriages accelerated at their turn-around points, i.e. an upper and a lying carriage, with at least two conveyor belts running around guide rollers on the carriages, i.e. a main and a guide belt, and with an electronic control mechanism for the laying process, whereby the nonwoven can be laid with a stretch, the speed ratio from the speed of the upper carriage VO and that of the laying carriage VL is variously adjusted depending on the positive or negative stretch.
