Abstract (en)
[origin: EP0609951A1] A folding wall consisting of rows of panels connected to each other for mutual pivoting, which rows are disposed at a distance from and parallel to each other and guided by a common guide rail (6), wherein one or more spacers (10) are arranged hingedly between pairs of mutually opposite panels, wherein at least one spring element (14) is connected to the mutually opposite panels of a pair, wherein a tilting member (16) supporting against the rail (6) is arranged on each panel, this such that the panels are straightened into the closing position by the spring mechanism (14) and are spread into the opened position by this same spring mechanism (14). <IMAGE>
