Abstract (en)

[origin: EP0609953A1] An installation for running out a tow rope from a ship or freighter, such as an oil tanker or a container ship, comprises a floating body, which is connected to the tow rope or an auxiliary cable and is provided with propelling means, and launching means intended to be fitted on board the ship for launching the floating body from the ship, such that, after the floating body has been launched, the cable can be run out with respect to the ship by means of the traction force delivered by the propelling means of the floating body, and can be kept in the run-out position for a prolonged period. <IMAGE>
