Abstract (en)

[origin: EP0610536A1] In a method for introducing a counting tab (28, 47, 48) in a sheet pile (7), sheets (11) are transported in a continuous stream of sheets (12, 13, 14) and counted and placed one on the other to form a sheet pile (7), during transportation of the sheets (11), in each case after a particular number for the purpose of marking a ream pile (49), a counting tab (28, 47, 48) being attached to a sheet (11) located in the stream of sheets (12, 13, 14) in such a way that it comes to rest in the sheet pile (7) between two ream piles (49) and partially protruding out of the sheet pile (7, 8, 9). In order that the counting tabs (28, 47, 48) are inserted in the stream of sheets (12, 13, 14) in such a way that the ream pile (49) is bounded precisely and with a high degree of reliability after the intended number of sheets (11), a counting tab (28, 47, 48), which is provided on one side, and there only partially, with an adhesive, is stuck to the top of the sheet (11) conveyed last in each case for a ream pile (49) in such a way that the part of the counting tab (28, 47, 48) projecting beyond said sheet (11) is free from adhesive. <IMAGE>
