Abstract (en)

[origin: EP0610588A2] The invention relates to an oven muffle (1) with at least one heating element (2) mounted in the muffle interior so as to be pivotable parallel to a muffle wall situated at a short distance therefrom. According to the invention, the pivoting axis of the heating element (2) is arranged outside the plane formed by the heating element (2). In particular, the heating element (2) is mounted on a pivot realised in the form of a knife-edge bearing. The pivoting mechanism is of structurally simple and largely wear-free design. The heating element can be relatively easily pivoted owing to the negligible friction. <IMAGE>
