Abstract (en)  
[origin: EP0610801A1] In the case of a handtool (1) for machining surfaces, having a machine casing (2) which accommodates a motor (3) and carrying, preferably at the front, on a toolholder (9) a rotating, revolving or oscillating tool (8), in particular an abrasive plate (8) with a triangular base for receiving triangular abrasive sheets with Velcro fastening, the object of providing a construction which is particularly easy to manufacture and has low weight, low noise development, low power requirement and tool change without auxiliary tool for tools of different application areas is achieved in that the toolholder (9) is designed in the manner of a shell with a base or contour, in particular a triangular base or contour, substantially corresponding to the base of the abrasive plate (8) and is supported by the edge (69) on the abrasive plate (8). <IMAGE>
