Abstract (en)
[origin: EP0610834A1] On a mounting tool (10) designed as a ratchet socket spanner with socket tube (14) which can be used either way, reinforcing bosses (22) with striking surfaces (24) are formed on the freewheel cover part (12), so that the tool can be used for screwing tight or unscrewing hexagon head screws or hexagon nuts, or, alternatively, as a striking tool for driving in and loosening wedges or positioning components. To save weight, the handle part (11) is made of light metal and the freewheel cover part (12) bearing the reinforcing bosses (22) with the striking surfaces (24) is a steel forging. <IMAGE>
