Abstract (en)

A silver halide photographic light-sensitive material improved in sensitivity, graininess and preservability is provided, comprising a support having thereon a silver halide emulsion layer containing silver halide tabular grains having a diameter of not less than $0.3 \mu\text{m}$ and a ratio of $1/d$ of less than 0.4, in which the thickness of a tabular grain is denoted by d and the distance between the tabular grain's principal plane and its twin plane nearest to the principal plane is denoted by 1 , and the tabular grains accounting for not less than 50% of the total projected area of silver halide grains contained in said emulsion layer.
