Abstract (en)

[origin: EP0611201A1] The present invention relates principally to a method of producing a covering (1), particularly for floors, to a covering obtained by means of this method, as well as to a method of laying the said covering. According to the invention, grooves (2) are made, for example in sheets of wood, which are filled with flexible adhesive (3). After the adhesive has set, an ablation of the material between the grooves, advantageously over a depth less than the depth of the groove, uncovers the projecting contact strips.
