Abstract (en)  
[origin: EP0611220A1] A transport installation on a separate road bed includes track sections 21, 22 of different length or different throughput rate, each being equipped with a hauling cable 23, 24, 25 for moving the vehicles 18 over the corresponding section of track. The vehicle is coupled in succession to different cables and each cable accelerates it, moves it, slows it down and brings it to rest at a station where the change of cable takes place. The longest track sections or section 22 are equipped with two or several hauling cables for simultaneously moving several vehicles over this track section. <IMAGE>
