Abstract (en)

An apparatus for cutting a product into slices comprises a support frame (1) with opposite attachment elements (4,5) and a cutting wire (2) attached to the support frame (1) by deformation of the attachment elements (4,5) as a plurality of substantially mutual parallel wire sections (3) at an equal spacing. The cutting wire (2) is guided around the sides of the attachment elements (4,5) directed away from each other. The distance between the said sides of the attachment elements (4,5) directed away from each other is enlarged by the deformation of the attachment elements as compared to said distance before deformation of the attachment elements. <IMAGE>
