Abstract (en)
[origin: EP0611863A1] The invention relates to a cabinet with positive locking for at least one door (14,16) which is articulated pivotably on a cabinet frame (12). Arranged in the region of a door edge (20) is at least one opening (42), the axis of which lies essentially parallel to the plane of the door and through which at least one snap-action bolt (26), fastened on the cabinet frame (12) and prestressed in the direction of the door (14,16), of a bolt mechanism (24) can penetrate in the closed position of the door. Further provided are an opening mechanism (22) and a linkage (32,34) which can be actuated by the opening mechanism (22) and can be actuated counter to the snap-action bolt (26), penetrating the opening (42), in order to release the engagement of the snap-action bolt (26) into the opening (42). <IMAGE>
