Abstract (en)
A plastic, three-part adjustable stop comprising a carrier member (11) that can be mounted, for example, on a door frame, an axially adjustable stop member (16) carried in a bore (12) provided in the carrier member and a rotatable locking member (20) operable to lock the stop member (16) in a preferred position in the carrier member (11). To install the stop, the assembly is mounted in the door frame, the door is closed so that the stop member (16) is pushed into the carrier member (11) whereupon the stop member (16) is locked in the position by rotation of the locking member (20). The stop subsequently ensures that the door always closes to the same position. <IMAGE>
