Abstract (en)

[origin: EP0612052A1] This is a marking device (12A, 12B) of the type including a support (14) suitable for accommodating an identification message, and, made in a single piece with this support (14), for fastening the assembly to an element to be marked, by means of a fixing connector (15). According to the invention, two marking devices (12A, 12B) are twinned detachably with one another, which allows a combined composition of identification messages which they are to carry. Application, especially, to identifying both of the ends of the same electrical installation cable.
