Abstract (en)
[origin: EP0612098A1] The invention relates to a single-base high-pressure discharge lamp whose discharge vessel (4) is completely surrounded by a heat concentration tube (10) and which is arranged inside an outer bulb (1). The ends (11) of the heat concentration tube (10) are pinched closed over the lamp current supply leads (7) projecting out of the discharge vessel (4). The heat concentration tube (10) is mounted in this way. Flat parts (7a) of the current supply leads (7) in the region of the pinched ends (11) serve as an anti-rotation element. <IMAGE>
