Abstract (en)

[origin: EP0612118A1] The invention relates to a method and an arrangement for preventing electrical crosstalk particularly in the case of circuit arrangements (substrates) which are fitted such that they are isolated by partition walls in a housing which can be closed on all sides, and which are suitable for the RF domain, especially the GHz band. In this case, an RF absorber plate, into which the pattern of the partition walls is introduced, is inserted into the housing, between the housing cover and the partition walls. <IMAGE>
