Abstract (en)

[origin: EP0613159A2] The invention is based on a switching arrangement having a housing (1, 2) for accommodating and for switching load interrupter switches, and having connecting block operation. The invention has the object of structurally and functionally improving such an arrangement. In particular, it is intended to be capable of being used for accommodating and switching load interrupter switches of different construction, and of reducing storage. To this end, it is initially provided according to the invention that two connecting blocks (3) are arranged side by side and parallel to one another in a common housing (1, 2) and that both connecting blocks can be operated, that is to say can be displaced.
