Abstract (en)

[origin: EP0613214A1] A terminal table suitable for use in an electrical equipment, which is capable of coping with an existing wiring mode in the equipment when a connecting mode on the external circuit side is changed. Respective terminal pairs (T) of the terminal table (10) are so constructed that one side (X) provides terminals of a wire press-tightening and connecting mode whereas the other side (Y) provides terminals of a crimp-style terminal tightening and connecting mode. The terminal table enables a desired external connecting mode to be adopted without regard to the equipment wiring mode. Thus, it is not necessary to prepare equipments whose wiring modes differ or to modify an existing equipment wiring, thereby reducing costs. <IMAGE>
