Abstract (en)
[origin: WO9309958A1] A supporting device for a wire comb comprises a support surface (18) and a plurality of support members (22) extending from said support surface (18) in spaced array, over each of which support members a looped portion of the comb, between adjacent fingers thereof, may be engaged to enable the comb to be supported from the supporting device in a cantilever manner.

Abstract (fr)
Un dispositif support pour peigne en fil métallique comporte une surface support (18) et une pluralité d'éléments supports (22) s'étendant à partir de la surface support (18) de manière espacée; au-dessus de chacun des éléments support, une partie du peigne en forme de boucle, se trouvant entre les doigts contigus de celui-ci, peut être engagée pour fixer le peigne en porte-à-faux sur le dispositif support.
