Abstract (en)

[origin: EP0613743A1] In a device for adjusting the narrow sides of a continuous casting mould for the purpose of adjusting the width and taper of the casting format of a continuous casting mould during casting, one narrow side (2) of the mould can be adjusted by means of an upper and a lower spindle drive (8, 9). To provide a simple, operationally reliable and space-saving device, the upper spindle drive (8, 9) has an upper guiding axle (5) on which an eccentric pin (20) connected in articulated fashion to a girder (4) of the narrow side (2) of the mould is rotatably mounted, the rotational position of the pin being determined by the position of the guiding axle (5). <IMAGE>
