Abstract (en)

[origin: EP0613781A1] An ink jet printing head (40) for effecting printing by ejection of ink includes a first electrothermal transducer (16,17) having a heat generating resistor (16) with a first area and wiring (17) electrically connected with the heat generating resistor; a second electrothermal transducer (12,13;14,15) having a second heat generating resistor (12;14) with an area which is different from the area of the first heat generating resistor (16); wherein bubbles are produced in ink materials upon application of electric signals to the electrothermal transducers, by which different volumes of ink materials are ejected; wherein the first and second electrothermal transducers have substantially the same bubble production threshold voltage. <IMAGE>
