Abstract (en)
[origin: EP0614041A1] Fastening device (12) for flush-mounted lighting bodies (11) suitable for being positioned on a side support surface of a lighting body, constituted by one pair of arms (13', 13'') arranged in compass fashion, and constrained, by means of a screwed rod (14), at a first, enlarged end thereof (15). Furthermore, said arms (13', 13'') are kept mutually spaced apart, in a rest position, by a spring (18). Said screwed rod (14) is slid into a through-bore (19') provided in the inner arm (13'), and a screwed bore (19'') provided in the outer arm (13'') of said pair of arms and, in that way, provides, in conjunction with the screwed bore (19''), an arm clamping element. <IMAGE>
