Abstract (en)
[origin: EP0615215A1] The counting station has a transport stage (2b), on which the banded bundles of securities (P) are moved uniformly at a specific distance past the rotating counting disc (1a, 1a') of a securities counter (1, 1') installed permanently on this transport stage. The transport stage (2b) is followed by a switch (9) with two further transport stages (2c, 2d), of which one receives bundles of securities with the correct number of securities and the other bundles of securities with an incorrect number of securities. <IMAGE>
