Abstract (en)

[origin: EP0615259A1] In order to produce the glued joint between the insulator (12) and the metal fitting (18), the glueing gap (22) is partially filled with a rapid-curing first glue compound (26). After this, the glueing gap (22) is completely filled with a slowly bonding, second glue compound (36). In consequence, the tool usage time is shortened and a fine-quality glued joint is achieved. <IMAGE>
