Abstract (en)  
[origin: EP0615398A1] In electroacoustic transducer (1) having a diaphragm (5), with a partition wall (24), located behind the diaphragm (5), in which wall openings (25, 26, 27, 28 and 29, 30, 31, 32) passing through the partition wall are provided, and with a mask (37) resting against the partition wall, in which mask openings (38, 39, 40, 41) are provided which can be brought to coincide with different wall openings (25, 26, 27, 28 and 29, 30, 31, 32) in different relative positions between partition wall (24) and mask (37), the mask is formed in a simple manner by a flange (37) of a magnet system part (19) of the magnet system (16) of the transducer (1). <IMAGE>
