Abstract (en)
[origin: FR2696352A1] A bat in the form of a sleeve can be slid over the hand of a player so that the latter can play as in tennis, on any type of ground , with or without a bounce on the ground. The bat (1) comprises an upper sleeve element (5) and a lower sleeve element (6) joined along an edge (7) wherein an opening (10) is provided for inserting the hand. Each sleeve element is more rigid in a flat central portion (11, 12) forming a striking surface than close to its periphery. The bat envelops and holds the hand due to its inherent elasticity. It may also comprise retaining means (13) on the surface and closure devices to each side of the wrist.
