Abstract (en)
[origin: WO9312006A1] A can has a bottom (16), a casing (12) and a lid (14). An opening member (18) is arranged on the lid (14) or on the casing (12) near the lid (14) and a second opening member (18) is arranged on the bottom (16) or on the casing (12) near the bottom (16). Both opening members (18) are identically designed as known ring-pull opening members (18) or tear-off strip opening members (18), so that the bottom (16) and the lid (14) may be completely or largely detached from the casing (12) with little effort and the casing (12) open at both ends may be squeezed with little effort.
