Abstract (en)
[origin: EP0544944A1] The present invention provides rinse-active foam-control particles for inclusion in a detergent composition in powder form, consisting essentially of a soap of fatty acids of which at least 80% contain from 16 to 18 carbon atoms, the geometric mean particle size of the particles being inferior to 1 mm, preferably inferior to 0.4 mm. The present invention also encompasses a process for making said foam-control agents, as well as high sud and low sud executions of detergent compositions containing said foam-control particles.

Abstract (fr)
L'invention se rapporte à des particules antimousse actives au rinçage, qui sont destinées à être incluses dans une composition détergente sous forme de poudre et qui sont constituées essentiellement d'un savon d'acides gras dont au moins 80 % contient 16 à 18 atomes de carbone, la granulométrie moyenne des particules étant inférieure à 1 mm, de préférence à 0,4 mm. L'invention décrit également un procédé de production de ces agents antimousse, ainsi que des réalisations fortement et faiblement savonneuses de compositions détergentes contenant ces particules antimousse.
