Abstract (en)

[origin: WO9311523A1] In the device and corresponding process for the lifelike, three-dimensional representation of speaking people, the face of a doll (2) is used as a projection screen. By means of a sound and image projection device (26), a film taken of the person concerned is projected on parts of the face of the doll (20) from inside and/or outside. At the same time an audio signal recorded by the same person is emitted in synchronism therewith.
