Abstract (en)

[origin: EP0615944A1] The invention relates to a procedure and a device for severing a fibre sliver on a drawframe in preparation for the can change. The object of the invention is to avoid the disadvantages of the state of the art at a lower outlay for severing the fibre sliver and, after severance, always to guarantee a specific fibre-sliver length in relation to the can. According to the procedure, the fibre sliver is severed between a pair of calender rollers (4) and a sliver-guide channel (7). The severing device (2) can be arranged correspondingly in this region. <IMAGE>
