Abstract (en)  
The invention relates to a scaffolding platform element. The platform element comprises an elongate plate (32) equipped, at each of its ends, with means (40) for securing on scaffolding elements (44). The securing means comprise two hooks (42) each equipped with an extension (54) which bears on the adjacent platform element. Each securing means comprises, moreover, a locking system (46) which is mounted so as to pivot. The locking end (90) is held in a locking position by means of a counterweight (80) which also forms the handle in order to permit detachment of the scaffolding element from the platform element.

Abstract (fr)  
L'invention concerne un élément de plancher pour échafaudage. L'élément de plancher comprend une plaque allongée (32) munie à chacune de ses extrémités de moyens (40) de solidarisation sur des éléments (44) d'échafaudage. Les moyens de solidarisation comprennent deux crochets (42) munis chacun d'un prolongement (54) qui vient en appui sur l'élément de plancher voisin. Chaque moyen de solidarisation comprend en outre un système de verrouillage (46) monté pivotant. L'extrémité de verrouillage (90) est maintenue en position de verrouillage par un contrepoids (80) qui forme également poignée pour permettre la désolidarisation entre l'élément d'échafaudage et l'élément de plancher. <IMAGE>
