Abstract (en)

[origin: US5480267A] PCT No. PCT/EP92/02153 Sec. 371 Date Aug. 16, 1994 Sec. 102(e) Date Aug. 16, 1994 PCT Filed Sep. 18, 1992 PCT Pub. No. WO93/06310 PCT Pub. Date Apr. 1, 1993.Known sets of structural elements have blocks with depressions and cross-shaped, T-shaped or Z-shaped connecting pieces which come to be located therein. Only retaining walls which are oriented in a straight line can be constructed. The set of structural elements according to the invention has, in addition to blocks with depressions, coupling pieces with at least a part thereof being in the form of a truncated cone, with corresponding cross-sectional shape of the depression. In this manner, a rotation of blocks, in particular located one above the other, is possible. Curved retaining walls can thus be erected.
