Abstract (en)
[origin: EP0616823A1] The invention relates to a separator for separating mixtures of liquids, in which a particularly simple and effective partition arrangement (7) is arranged between an inlet (2) and an outlet box (5). The partition arrangement (7) is composed of staggered partitions (7a, 7b) which are arranged in such a way that a uniform flow results with subsequently circular motion substantially without turbulence in the tank (1).
