Abstract (en)
[origin: EP0616840A1] An intermediate ring 1 is equipped with a plurality of pipe branches 2 for the inflow and outflow of a solvent. The pipe branches have flanges 3 which are flanged to corresponding flanges of feed lines and outlet lines for the solvent. For the installation of the intermediate ring between a discharge valve and a bottom flange of an agitator, mixer or dryer, an attachment flange 8 is mounted on the intermediate ring in a plane perpendicular to the flanges 3. <IMAGE>
