Abstract (en)

[origin: EP0616873A1] In the case of a screwdriving tool for screws (3) connected by a strip, a movable lifting-off member (18) is provided in the guiding channel (11) of bearing body (1) in the region of the guiding bore (12) for the screwdriving blade (14), in the case of the screw strip (2) the lifting-off member lifting off the connecting band (5) from the screw (3') to be screwed in. The latter can thus be screwed into the workpiece (16) unhindered, which is advantageous especially in the case of screws (3) with large head diameter or with sealing washers (10) placed underneath.
