Abstract (en)
[origin: EP0617157A1] The invention relates to a novel automated industrial washing machine for laundry articles; it loads the laundry articles to be washed automatically from above by means of movable baskets or shuttles (CC) and unloads the washed laundry articles automatically downwards onto a conveyor band (N); it automatically opens and closes the loading and unloading flaps (P1, P2) which are located on the cylindrical surfaces of the rotary drum and of the tub (V) respectively. The washing machine is also equipped with a system which redistributes the load during spinning.
