Abstract (en)
[origin: EP0617240A2] Mixed boiler for the provision of domestic hot water and heating water, having a primary heat exchanger (3), ... domestic hot water heat exchanger (11) which can be connected during drawing operation, and a flow temperature regulator (21) which is assigned a comparator (22) connected to a flow temperature setpoint generator (19) with a flow temperature sensor (18). In order to be able optimally to regulate the outlet temperature of domestic hot water, too, provision is made, when the domestic hot water heat exchanger (11) is activated, for the input, connected to the flow temperature setpoint generator (19), of the comparator (22) assigned to the flow temperature regulator (21) to be supplied with the output signal of a domestic hot water temperature regulator (23) which is connected, on the input side, to a comparator (24) whose inputs are connected to a domestic hot water outlet temperature sensor (26) and a domestic hot water setpoint generator (20). <IMAGE>
