Abstract (en)
[origin: EP0617392A1] A measuring system comprises: an input unit which is adapted for connection to a number of sensors for respective quantities for measuring, which sensors are each adapted to generate a measurement signal representative of the value of the relevant quantity; a central signal processing unit which is connected to this input unit and which comprises marking means for marking the measurement signals; a transmitter which is connected to this central signal processing unit and which can transmit radio signals containing the marked measurement signals; a number of portable receivers which can receive these radio signals, which receivers each comprise detection means which are adapted to detect at least one measurement signal with a preselected marking; and display means connected to these selection means for displaying the relevant measurement value. <IMAGE>
