Abstract (en)
[origin: EP0617482A2] In the case of a mains cable plug connection for electrical appliances and electrical tools, the plug which is connected to the electrical cable consists of two plug part halves which are connected to one another and on which latching vanes, which are flexible in an elastically resilient manner, are fastened from the outside by means of a common screw union, which latching vanes secure the plug in a positively locking manner by means of latching shoulders on both sides in the interior of a retaining socket into which it is inserted, with the aid of latching shoulders which engage behind corresponding locking recesses in the retaining socket. <IMAGE>
