Abstract (en)

[origin: FR2696999A1] Device for the identification of a bottle and locking of its closure element, the neck (12) of the bottle being sealed by a closure element and including a cap (50) arranged to be adapted thereon (12) above said closure element. The cap comprises at least one identification code and movable locking means including at least two grips (56) for engaging under a projection (17) on the neck (12) or under the closure element, and an activating sleeve (55) movable between two positions and arranged to release or lock said grips according to whether it is in one or other of the positions. The device also includes a sensor for detecting and reading the identification code and for releasing the bottle's closure element. The device is for use in individual, controlled and automatic management and monitoring of bottles in restaurants, bars or other public places.
